

GREYSTONE MACHINIST LAUNCHPAD

Launch

If you are in search of a high growth potential and stable career, consider Greystone's Machinist Launchpad Program. Our four step program is designed to provide a breadth of manufacturing skills experience over a 6-month period. Graduate from our Launchpad Program debt-free and well on your way towards a rewarding career in manufacturing.

1.

GRIT CHECK

In this phase candidates will perform various tasks that are physically and mentally challenging. The basics that are learned in this phase will familiarize candidates with the parts we make, the process flow of the plant and how departments work together to get parts to the customer.

MACHINIST BASICS

Candidates will learn the specialized equipment that is used to make certain parts in the plant. The hands-on aspect of this phase will develop a strong foundation in understanding how machining equipment works.

2.

3.

MACHINIST APPRENTICE

Candidates will start this phase with a basic understanding of the parts we make, how the plant works and the importance of quality standards. While in Grind, the goal is to be efficient at running one machine. This phase will help build the skills necessary to run two primary machines upon graduation.

QUALITY STUDENT

Candidates will become familiar with our Automated Inspection Machines and shadow a Quality Technician in their assigned department, helping troubleshoot quality issues and close containments.

4.
